**IL SEGRETO DELL'ORIGINALITA' DELLA
COMPOSIZIONE ORGANICA:**

IL MAR MORTO

Il Mar Morto riceve le acque del fiume Giordano e di altri immissari, ma non possiede un emissario.

Le alte temperature che caratterizzano quest'area geografica provocano nel bacino un'evaporazione delle acque che rilasciano, al termine del processo, residui salini concentrati composti da ben 37 minerali diversi dalle elevatissime proprietà benefiche.

Tra questi spiccano zolfo, calcio, magnesio, sodio, jodio e potassio. Lo arricchiscono inoltre alghe come la Dunaliella e Arachea, particolarmente ricche di oligo-elementi e di un betacarotene molto attivo, che permette loro di sopravvivere alle condizioni estreme di quell'habitat.
